## Leptospirosis Vaccination Guidelines

As you know, pets age many times faster than humans and we want to be sure all pets are healthy before receiving any vaccine or medication. Our vaccine policy is always to have a doctor perform a full examination at the time of any vaccine. With the introduction of this new vaccine we understand that many of our patients have recently been seen for a wellness examination. We may waive the examination if the criteria below are met. Please read the following guidelines and answer the questionnaire below to help us schedule your dog accordingly. Thank you.

1. Dogs only.
2. Dogs must be 16 weeks old or older.
3. Initial series of 2 vaccines are given 3 weeks apart, and then the vaccine is given annually.
4. Dogs must have had an examination by a doctor at Summit Animal Hospital within 1 year and be healthy with no current medical issues.
5. If your dog has a current medical issue or an ongoing problem, the doctor will review his/her medical history and decide if another examination is needed before vaccination.
6. If the above criteria are met, owners can fill out the questionnaire below and schedule a technician appointment. In a technician appointment your dog is taken to our treatment room by a receptionist or technician and the vaccination is given by a technician. The only charge is for the vaccine which is \$19.75 per dose.
7. If you prefer to have a full exam by one of our doctors or have medical or health questions about your dog we will be happy to schedule a regular examination. Normal examination and vaccination charges would then apply.
